EDUCATION

Bachelor of Technology in Computer Science & Engineering (Data Science)

Dwarkadas J. Sanghvi College of Engineering (DJSCE), Mumbai | First Year CGPA: 8.95 / 10.0 | 2025 – 2029

EXPERIENCE & LEADERSHIP

Technical Associate | *DJS eXpress (Official Publication & Media Society of DJSCE)*

- Collaborated with a cross-functional team of technical associates to design, develop, and deploy the official DJS eXpress organization website.
- Built responsive, accessible frontend UI components and integrated client-side routing and media showcase sections for college events and publications.
- Utilized Git for collaborative version control, participating in code reviews, resolving merge conflicts, and maintaining production-ready branch workflows.

TECHNICAL SKILLS & PROFILES

- **Programming Languages:** Python, JavaScript (ES6+), C, C++, HTML5, CSS3, Jinja
- **Frontend Technologies:** React 19, Vite, Tailwind CSS, DaisyUI, React Router v7, HTML5 Canvas, Three.js
- **Backend & Databases:** Node.js, Express.js, Socket.io, Upstash Redis, MongoDB, Mongoose, Flask
- **Tools & Methodologies:** Git, GitHub, Linux, Selenium WebDriver, RESTful APIs, WebSockets, Axios
- **Competitive Programming:** Codeforces Rating: 950 (bruhmemer123)

PROJECTS

Automated Wordle Solver | *Information Theory & Browser Automation*

Technologies: Python, Selenium WebDriver, Mathematics (Shannon Entropy) • GitHub: github.com/bruhmemer123/wordle-solver

- Engineered an autonomous bot solving NYT Wordle using Shannon Entropy to maximize expected information gain per turn.
- Implemented an entropy-scoring algorithm evaluating candidates across 243 feedback patterns to prune search space.
- Automated browser gameplay with Selenium WebDriver, handling cookie consent, UI modals, and human typing cadences.
- Parsed dynamic HTML components (ARIA labels, data attributes) in real-time to extract tile evaluations.

Real-Time Multiplayer Drawing Game | *Skribbl.io Clone*

Technologies: React, Node.js, Express.js, Socket.io, HTML5 Canvas • GitHub: github.com/bruhmemer123/skribbl | Live: skribbl-1knkf.onrender.com

- Built a multiplayer drawing and guessing platform utilizing Socket.io for low-latency canvas stroke synchronization.
- Architected a server-authoritative engine managing player lobbies, randomized drawer rotation, turn timers, and room resets.
- Implemented live chat guess validation with automated word verification, custom word-bank injection, and guest fallback handling.
- Handled WebSocket edge cases including mid-game player disconnects, host migration, and deployed full-stack build on Render.

MERN Stack Notes Application | *Distributed Rate Limiting & REST API*

Technologies: React 19, Vite, Node.js, Express, MongoDB, Mongoose, Upstash Redis, Tailwind CSS • GitHub: github.com/bruhmemer123/MERN-notes-app | Live: mern-notes-app-smis.onrender.com

- Developed a full-stack note management application using React 19, Vite, Express, Tailwind CSS, and DaisyUI.
- Integrated Upstash Redis middleware to enforce distributed API rate limiting on backend endpoints, preventing API abuse.
- Designed RESTful CRUD APIs with Mongoose schema modeling and asynchronous frontend request handling via Axios.
- Configured client-side routing with React Router v7 and environment-aware CORS configurations for production.

INTERESTS

Coding challenges, game development, exploring new technologies.
